

FOOD CONTACT STATEMENT

Durst UV inks and food contact

Durst UV inks are manufactured in accordance with the latest EUPIA Guideline on Printing Inks, however, they are NOT recommended for printing food packaging, even where the printing is on the reverse of the food contact side of primary packaging.

The inks might be suitable for use in NON-CONTACT food applications where food packaged in a functional barrier packaging material is held or displayed in board material printed with Durst UV inks. In such applications, it is still essential that the ink is fully cured. Compliance with the local directives or brand requirements is within the responsibility of the final converter.

We stay at your disposal for any further questions.

Best regards,

A handwritten signature in blue ink, appearing to read "S. Kappaun", is written over a horizontal line.

Dr. Stefan Kappaun, MBA
Executive Vice President Inks and Fluids
